

The SciLIMS Solution

Advancing Your Lab...Effortlessly

If your scientific lab is among the vast majority that still depends on informal tools (Excel, paper-based notebooks, home-grown utilities) to capture and manage information, you undoubtedly recognize that a professional Laboratory Information Management System (LIMS) could help to advance your lab. But, you know that LIMS solutions take too long to implement, cost too much, and are difficult to use – until now. **Introducing the SciLIMS family of solutions from Sciformatix.**

Benefits for Your Lab

SciLIMS will help your lab to excel at accurately capturing and tracking information about your samples and other “subjects of interest”, including source information and lab results data. With SciLIMS, your lab will reduce operating costs, enhance throughput, and significantly improve the utilization of valuable sample material, reagents, and other materials. You will also diminish or eliminate the expenses and challenges associated with software development and IT administration, all while enhancing compliance with your internal standards and/or external requirements. Overall, SciLIMS will help your lab to boost its performance and allow you to do more, do it better, and do it less expensively.

Connecting People & Processes

Forget those scattered sources of information and tools that limit access to one user at a time. SciLIMS gives your lab a central database that connects lab professionals and other stakeholders, allowing them to contribute, share, and benefit from a common and consistent set of information across projects and processes. With its real-time multi-user access, information entered by one user is instantaneously available to other authorized users. And, SciLIMS can integrate with other tools, allowing you to feed data to, and receive data from, other lab processes.

Putting You in Control, Securely and Affordably

SciLIMS’ unique design and advanced user interface, flexibility, and ease-of-use put you in control. Unlike other LIMS solutions, SciLIMS allows lab professionals to tailor the information you wish to capture, track, and deliver, and without costly and time-consuming customization by IT professionals. With secure data management and communication channels, SciLIMS ensures your data is safe, allowing access only to authorized users that you designate. And, SciLIMS is affordable for any lab, consistently delivering benefits that exceed its modest cost.

Cloud Computing for Rapid and Simple Deployment

SciLIMS is delivered as a “Cloud Computing” and Software-as-a-Services (SaaS) subscription solution, providing the most efficient deployment approach available. Sciformatix hosts and maintains the SciLIMS application along with your secure database area, eliminating the need for your lab to purchase, install, and maintain computing resources and/or incur costly licensing and maintenance fees. This also removes numerous burdens on software development and IT administration resources.

SciLIMS – the future of LIMS!

- » **CAPABLE**
Solves tough problems with ease
- » **FAST**
Faster than setting up spreadsheets
- » **EASY**
Designed for lab professionals, and no burden to IT
- » **FLEXIBLE**
Puts control and tailorability in your hands
- » **SECURE**
Secure data management & communications
- » **ECONOMICAL**
Affordable by labs of any size

Choose the SciLIMS Version That's Right for Your Lab

SciLIMS comes in different versions, providing a fit for every lab organization. The SciLIMS Samples Editions are designed for labs that need to capture information about their samples and other “subjects of interest”, but where the need for storage management (containers, freezers, etc.) is simple or non-existent. SciLIMS Advanced Editions provide all of the features of the Samples Editions, additional features for container and samples content management, plus advanced storage management, sample transfer algorithms, and other valuable features.

General Feature Area	Samples Editions	Advanced Editions
Samples Definition & Management	✓	✓
Advanced Search Tools (Samples)	✓	✓
Samples Data Exchange with External Tools	✓	✓
Container Definition & Management		✓
Samples Volume & Concentration Mgt		✓
Material Transfer Algorithms		✓
Storage Configuration Mgt & Samples Locator		✓
Label Design & Printing		✓

Get Started Today – Get Results Today!

Are you ready to propel your lab to new heights? Contact your SciLIMS representative, or contact Sciformatix directly (www.sciformatix.com) to get started with SciLIMS today, get results today, and achieve lasting value.

Notable Quotes

“SciLIMS solves problems I never thought we would solve.”

- General Manager, prominent genome facility, Northern California

“The best user interface of any LIMS I’ve seen – and I’ve seen many.”

- Lab Manager, prominent biotechnology company

“...impressively simple to install, tailor, and use...a new option for overlooked labs.”

- LIMS industry analysts

“Scientific labs will clearly benefit from the SciLIMS solutions.”

- President & CEO, supplier to lab operations

“...we have the ability to gain insight about our samples, even in other parts of the world.”

- Lab Manager, multi-national lab operation
